Daniel Winslow
President
Maine Automation Inc.
Westbrook, ME 04098

Attention: Mr. Winslow

I would like to express our appreciation to Maine Automation Inc. for a well executed project here at the Wyman Unit # 4 600MW Oil Fired Facility during our Spring 2007 Controls Upgrade Outage. The multiple tasks project was awarded to Maine Automation Inc. in mid March, 2007 to provide I&C Technicians under a very aggressive schedule over a two month period. During this period, over 350 Instruments were calibrated, 165 transmitters were replaced and 2700 loops were checked. Maine Automation Inc. provided experienced personnel to calibrated instruments, install transmitters and check out loops and by doing so, the ability to complete those multiple tasks in a timely manner made the project very successful. Maine Automation spent over 4,500 man-hours performing those tasks and recorded a superb safety record.

It was a pleasure working with the Maine Automation site management team and we appreciate the professionalism and team spirit shown here at the Wyman Energy Center.

Please extend our appreciation to all involved in such a successful project. We look forward to a future relationship with Maine Automation Inc.

Sincerely,

Eddie Hackelton
FPLE Construction Manager
